Converting idea into working POC

- Selection of right microcontrollers for your idea
- Test your logic/test cases using simple electronics components
- As sensors are all about voltages and currents, build around your idea without sensors
- Know better about ADCs used in microcontrollers
- Just use serial monitors, switches, buttons, LEDs, buzzers etc

- Selection of right microcontrollers for your idea
- Test your logic/test cases using simple electronics components
- As sensors are all about voltages and currents, build around your idea without sensors
- Know better about ADCs used in microcontrollers
- Just use serial monitors, switches, buttons, LEDs, buzzers etc

About the FDP

Internet of Things (IoT) is a new revolution of the Internet. It is a network of physical devices, vehicles, home appliances, and other items embedded with electronics, software, sensors, actuators and network connectivity which are linked to create smart environments. It allows objects to be sensed and controlled remotely across existing network infrastructure. Also, it is creating opportunities for more direct integration of the physical world into computer-based systems, which results in improved efficiency and accuracy. One of the key learning platforms for IoT is the Raspberry Pi. The RasPi is a popular platform because it offers a complete Linux server in a tiny platform for a very low cost. In fact, one of the most difficult parts of using Raspberry Pi for learning about IoT is picking the right projects with which to begin. The workshop will give the platform to understand and use Raspberry Pi for IoT applications.

Tentative Topics to be Covered (but not limited):

- Understand the rudiments of IoT
- IoT Architecture and Technologies
- IoT Security
- IoT applications and services
- IoT in Health care
- The Arduino or Galileo processor Platform
